

Mock Site Survey

You have been contracted by a local construction company in Calgary to capture updated drone photos on their building site. They have provided you with a sample image of what they are looking to obtain along with the GPS coordinates of the location.

Site survey tasks

Please plan the above flight as if you were going to be flying it on the day of your actual flight review. The flight reviewer will want to see your Site Survey for this location, as complete as it can be, without having to actually visit the site.

Be prepared to answer questions on the following at minimum;

- Anticipated flight duration and altitude
- Airspace classification, coordination requirements and process
- Weather and environmental factors that could impact your flight
- Coordination with any other authorities, aerodromes, airports, heliports as necessary

NOTE

- You do not need to coordinate with ANY regulatory bodies for this mock site survey. Please just make a note of who you would need to coordinate with and the process of this.
- You do not have to visit the above site.
